

HIGH SPEED INTERNET ACCESS

Exceptionally professional internet connectivity

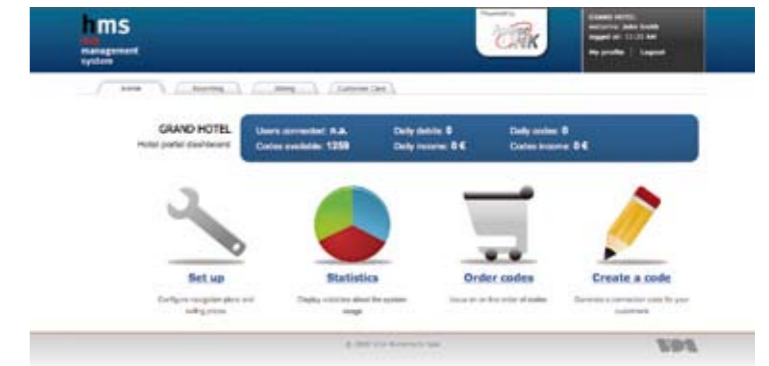

PowerTV HSIA (High Speed Internet Access) is a new system of Internet Connectivity, created by VDA, that allows guests to surf from their own laptop in their hotel room and common areas. **HSIA is a revolution in terms of its ease of use, flexibility of options and the creation of access codes.** A high level of professionalism makes the management of Internet connections by reception, incredibly simple.

1

The SYSTEM is easy to use

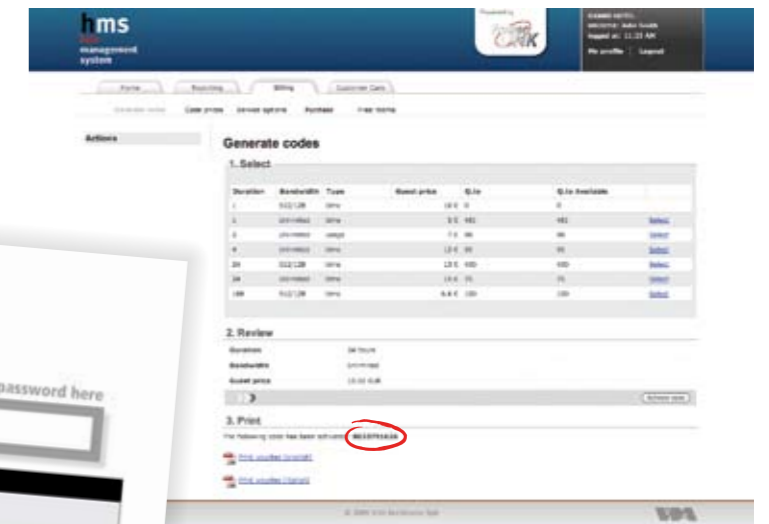

A clear, practical web-based interface can be accessed from any computer connected to the network.

2

CONNECTIVITY is quick to activate

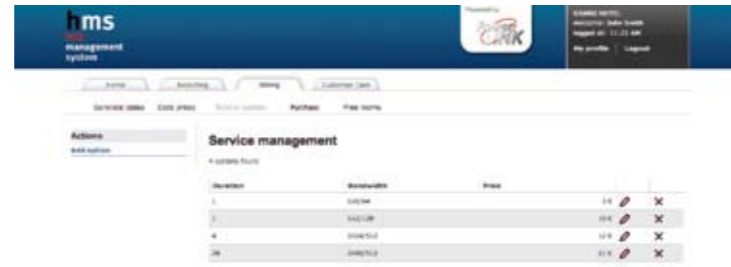

With only 3 clicks, the operator at reception can generate an access code for guests wishing to surf wirelessly. Another click and the code is printed out together with instructions, meaning no more scratch cards and thus lower operating costs. Room connections are even easier; guests simply plug in laptop cable and accept the charge.

3

Connection TIME is configurable

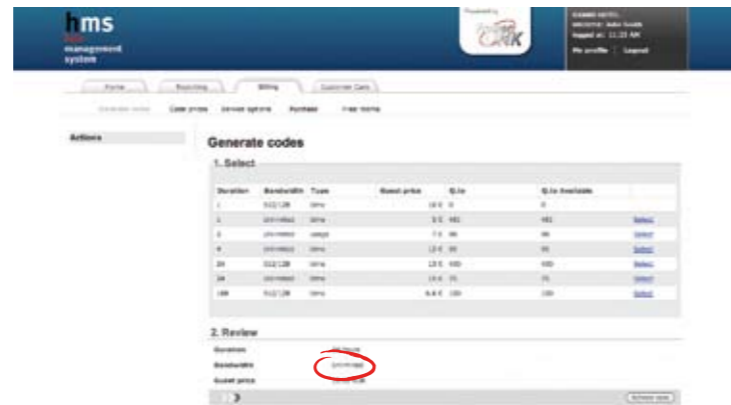

Hotels can offer Internet connections with multiple configuration options, including variations on connection **duration, speed and price**. For example, hotels can configure offers from 1 hour to several days according to the level of usage or cut-off times.

4

Even the connection SPEED is variable

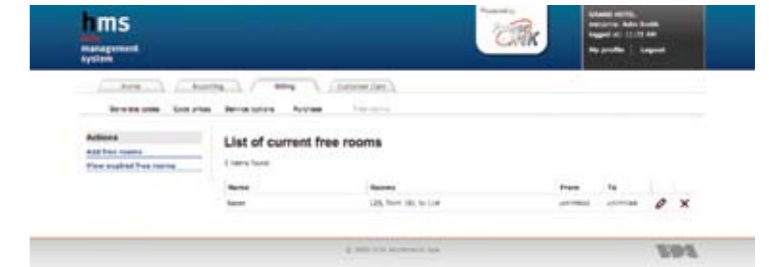

With PowerTV HSIA **the connection speed can be configured** according to either customer needs or those of the hotel to restrict, for example, the consumption of total bandwidth.

5

The PRICE is configurable

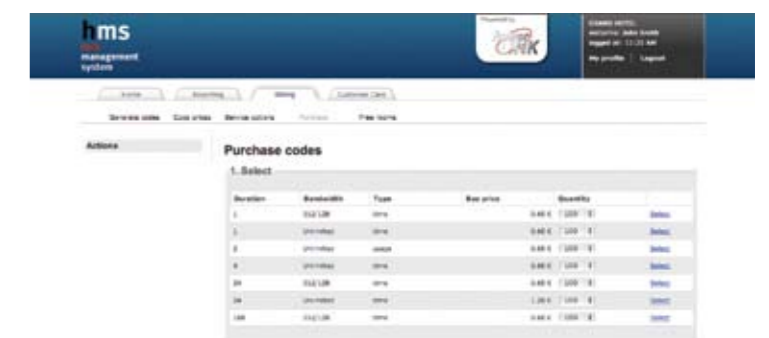

The wireless connection **selling price is determined by the hotel** with full autonomy. For connection in rooms via cable, hotels can also **offer free connection** to a single room or groups of rooms.

6

Buying new CODES is simple

Hotels purchase code packages for sale from VDA. Ordering is as simple as shopping online. **Simply enter the management interface**, and in a few steps the operation is completed.
